

WHAT ARE THE ADAS SECURITY SYSTEMS?

They are advanced help systems for the driver that are increasingly present in the new vehicles. Its functions include the management of the adaptive cruise control, object detection or lane departure detection.

These systems must be correctly adjusted after accidents, windscreen wiper renovation, control unit substitution, adjustments in the vehicle chassis, inappropriate behaviours, etc.

JALTEST ADAS

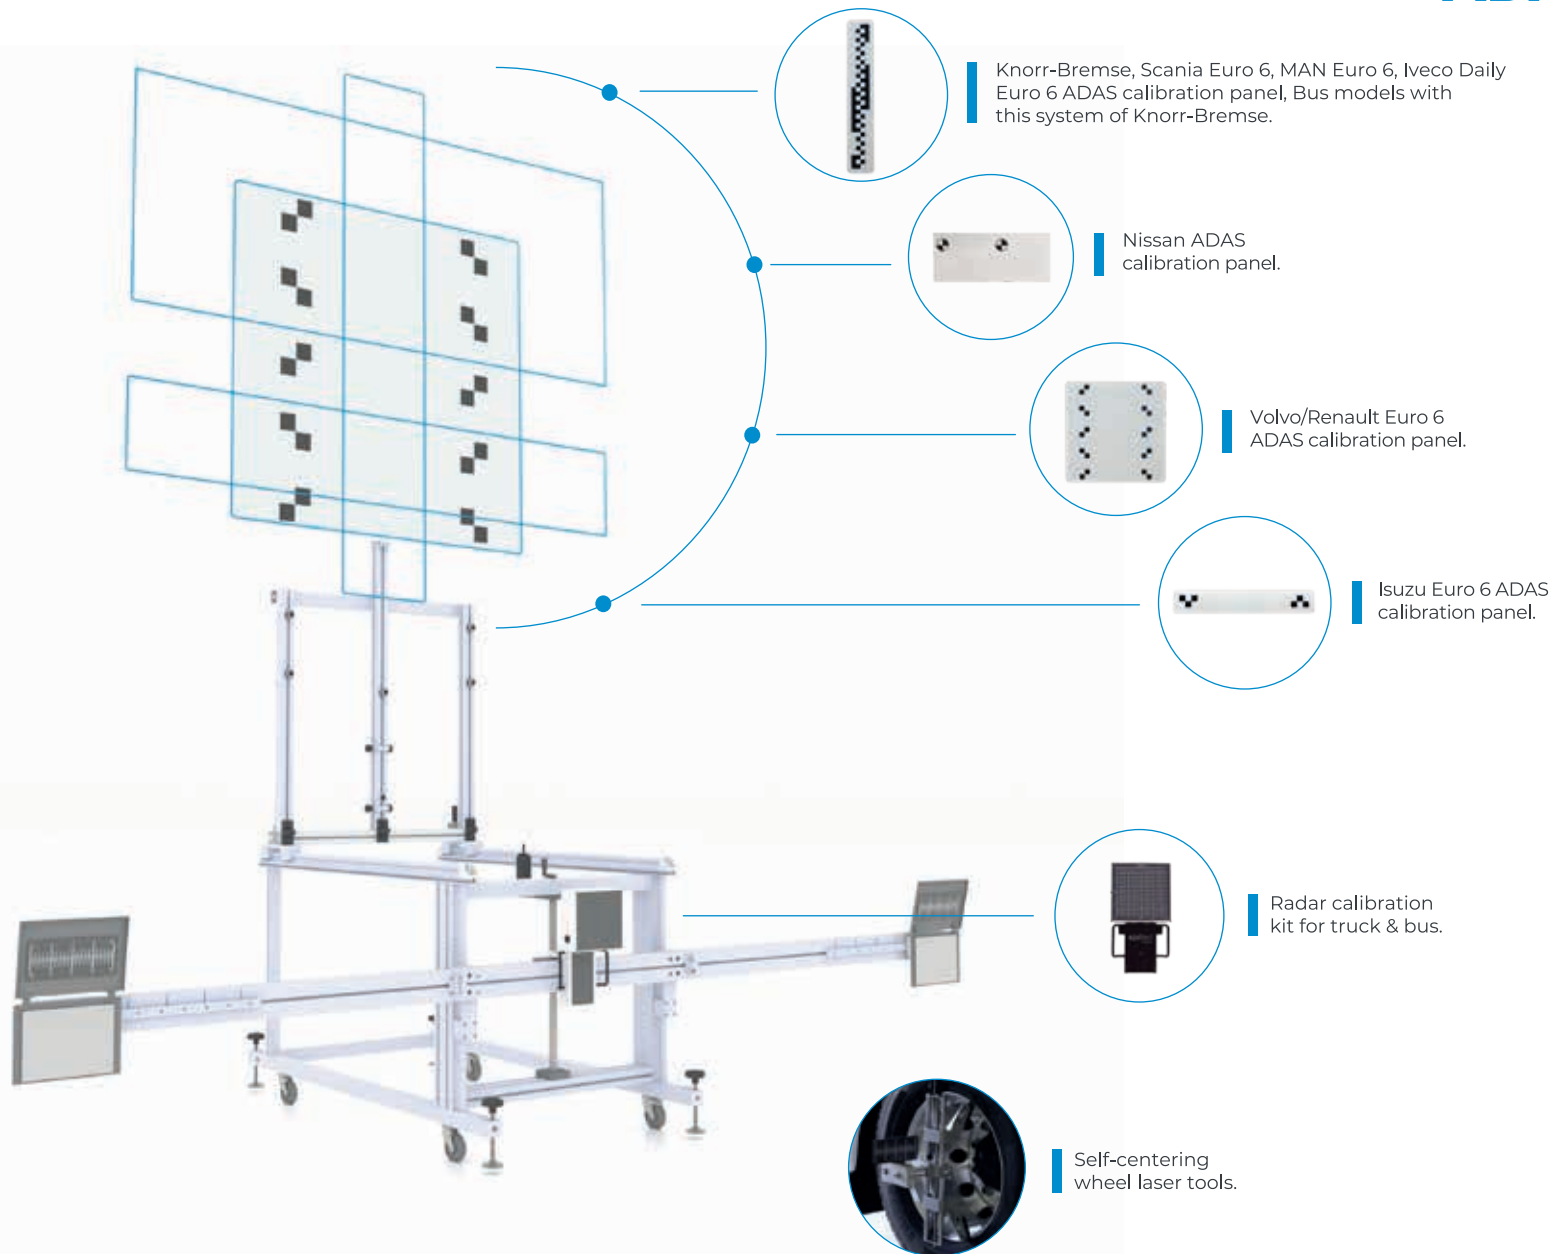

In order to meet the challenges that this entails, Jaltest Tools range launches on the market, in a pioneer manner, the equipment and accessories necessary for the correct calibration of ADAS systems present in commercial vehicles, always accompanied by detailed information for its installation and operation.

CALIBRATION AS A DAILY TASK

It will be very important for the workshops to have the necessary tools and means to meet this type of requests, since more and more vehicles will require a professional calibration.

Jaltest ADAS is a perfect complement to any diagnosis tool and, especially to the Jaltest tool, that will complete the calibration process.

WIDE COVERAGE

- Truck.
- Bus.
- Light commercial vehicle.
- More than 370 models.
- More than 30 brands.
- More than 25 systems.

MAKE A DIFFERENCE

- Professional, universal and flexible calibration.
- Dynamic and static calibration.
- Folding modular frame.
- Self-centering wheel tools.
- Multibrand panels.
- Ideal complement for calibration with Jaltest diagnosis tool.
